# THORNDALE IVY

Hardy

Distinctive

Versatile [1961]

There is today a concerted effort to select *Hedera helix* varieties most hardy under the wide extremes prevailing in our northern areas. Though 'Thorndale' is new, it is now recognized as superior for our sub-zero zones.

Having both hardiness and beauty in vines suitable for modern landscaping, is an ideal combination. 'Thorndale' is distinctively beautiful. Bold, large leaves, lustrous dark green, accented in winter-time by light, silvery veins.

Versatility is a factor which adds usability to plant material. 'Thorndale' will readily climb any wall surface which has aged sufficiently to permit moisture penetration. The vigor of 'Thorndale', combined with its hardiness and beauty attraction, offers unexcelled merit for ground cover use.

# LINERS

Our liners are "modern methods" produced, grown for the plantsmen in our local, beautiful Ohio Valley area. These are developed in containers, varying from the small clay pot to the 5" pot. Most items of this weight caliber

are normally picked up, but for those desiring shipment, part of the soil mix is rubbed off to reduce weight and still permit safe handling. Another CG specialty!

## BROADLEAF EVERGREENS

(25 @ 100 rate; 250 @ 1000 rate)

	Size pots	100	Price per 1000
<b>BUXUS SEMPERVIRENS (CARR'S)</b> Selected for hardiness under Indiana extremes.	4"	\$ .40	\$ .38
<b>EUONYMUS FORTUNEI (ACUTUS)</b> Rich green summer color; procumbent habit.	2 1/4"	.14	.12 1/2
<b>EUONYMUS FORTUNEI COLORATUS</b> The juvenile form of the purple-leaf wintercreeper; best suited for ground cover and wall cover.	2 1/4"	.14	.12 1/2
<b>EUONYMUS FORTUNEI GRACILIS</b> Most suitable for wall cover; some variegation.	2 1/2"	.16	.14
<b>EUONYMUS FORTUNEI GRACILIS</b>	4"	.40	.38
<b>EUONYMUS FORTUNEI MINIMUS</b> Very small leaf form, ideal for foundation or low wall cover.	2 1/4"	.16	.14
<b>EUONYMUS FORTUNEI 'SARCOXIE'</b> An excellent upright with good foliage, both summer and winter.	2 1/4"	.18	.16
<b>EUONYMUS FORTUNEI 'SARCOXIE'</b>	4"	.40	.38
<b>EUONYMUS FORTUNEI RETICULATUS</b> Desirable for the blend of pink, white and cream foliage. Excellent wall cover, where contrast is desirable.	2 1/4"	.18	.16
<b>EUONYMUS FORTUNEI VEGETUS</b> The euonymus which has given us a standard of perfection. Selected type, as further described below.	2 1/2"	.18	.16
<b>EUONYMUS FORTUNEI VEGETUS</b> A mature strain, offering fruit, selected for good leaf form. Ideal as free standing specimens, broad panels, and wall cover.	5"	.40	.38

## LYTHRUM

Have you used this hardy perennial for permanence in the garden? It's just now becoming widely known, accepted for real hardiness and for its long period of prolific summer bloom. The following varieties are the newest, most desirable.

Size: 1 yr. No. 1, dormant plants.

Morden Gleam. Carmine, nearly red

Morden Pink. Rose pink

Robert. Rose red; shortest habit.

Prices: 25 @ \$5.00; 100 @ \$17.00; 250 & up @ \$15.00 per 100

## PRIMULA

The hardy primrose is one of our most fragrant, early spring blooming, best loved plant gems. We have admired its great blend of colors since early American times, but only recently have our hybridizers increased the flower size to that of the silver dollar. Partial shade preferred, in places kept moist in summer.

Pacific Hybrid Strain (Polyanthus)

Mixed colors only for spring . . . . Rainbow blend of blue, red, white and yellow.

1 yr. No. 1, frame grown

Prices: 25 @ \$5.00; 100 @ \$18.00; 250 & up at \$15.00 per 100

Please observe quantity specifications; our rates are based on large quantity production, keyed strictly to wholesale outlets.

All liners are pruned, sprayed, fertilized and transplanted regularly. There can be no guess-work in production today, so "Modern Methods" are necessary to assure only the best at a reasonable price.

# CLEMATIS

pre-cooled and rested  
Extra heavy — Loose Root  
6 at 12 rate; 25 at 100 rate

Attention Mr. Florist: Have you tried potting clematis for that eye-catching, appealing display of color, to sell along with other spring plants. A blooming clematis, in either 4" or 5" pot, easily trained on 4' cane stake, sells on sight. Only 5 to 6 weeks is required to bring the dormant plant into bloom. If first you do not sell, prune back as you would a bloomed-out rose, and new bloom will be re-created. You can't lose, you will have both earned a profit and satisfied the home gardeners' desire for color and set him up for many successive years of enjoyment.

The clematis offered in this list are 2-yr. plants which have been removed from 5" pots and bundled loose-root, shipped in dormancy. Very rapid growth initiates once repotted for spring sales, presenting a heavier plant.

		Each Per 12	Each per 100
HULDINE	pearl white	\$ .90	\$ .85
ELSA SPAETH	bright blue	.85	.80
ERNEST MARKHAM	fuchsia-red	.85	.80
VILLE DE LYON	purplish red	.90	.85
MRS. CHOLMONDELEY	light blue	.90	.85
MONTANA RUBENS	rose-red	.85	.80
RAMONA	lavender-blue	.85	.80
MME. BARON VEILLARD	rose-pink	.85	.80

## CLEMATIS ÷ 1 Yr. Plants

Foil wrapped 1 yr. pot plants, each labeled as to variety and color.

(25 of a variety at the 100 rate; 6 at the 12 rate)

ELSA SPAETH		\$ .55	\$ .50
Profuse, large bright blue			
ERNEST MARKHAM		.55	.50
A strong growing, prolific blooming, fuchsia red.			
HULDINE		.60	.55
A new hybrid from England. Pearl white with delicate mauve-pink bars on the reverse side			
MME. BARON VEILLARD		.55	.50
A French introduction, of moderate size in generous clusters, of warm lilac-rose.			
MRS. CHOLMONDELEY		.60	.55
Large, open flowers in profusion, of delightful light blue.			
MONTANA RUBENS		.55	.50
2 - 2½" rose-red flowers, changing to clear pink, in profusion. Blooms in May on year-old wood, offering an early mass of color. Especially desirable for wall or screen cover. Known as the 'pink anemone clematis'.			
NELLY MOSER		.65	.60
Large flowers, mauve sepals with red bars radiating outwardly. Profuse and vigorous.			
RAMONA		.55	.50
Blue, accented by a disc of darker anthers. Fine summer bloomer, vigorous growth.			
VILLE DE LYON		.60	.55
Reddish purple, accentuated by the whitish stamens.			

# GROUND COVERS

The wall behind this balustraded terrace at Queen Elizabeth Park, Niagara Falls, Canada, is completely clothed with espaliered euonymus, in this case coloratus, the purple-leaf wintercreeper. Vigorous fortunei varieties make the best espalier covers.

**HEDERA helix 'Wilson'.** A new "Baltica" type Ivy, distinguished by its hardiness, neat procumbent habit and attractive summer color. Not as eye-catching in year-round beauty as Thorndale but equally as hardy.

Pots ..... \$15.00 per C; \$130.00 per M

**HEDERA helix 'Thorndale'.** One of the hardiest varieties available today. The leaf color is deep green and glossy with distinctive silver veins adding interest. An excellent climber and unequalled as a ground cover.

Pots ..... \$17.00 per C; \$150.00 per M

**PACHYSANDRA terminalis.** The Japanese spurge has popular appeal as cover in shaded positions on the landscape, and in soils naturally acid or mechanically prepared with materials to lower the pH. An occasional pruning enhances the effectiveness of spurge.

Pots ..... \$12.50 per C; \$110.00 per M

**VINCA minor.** The common myrtle is universally used for covering areas on slopes, in shade, and as underplanting. The foliage is lighter green than of 'Bowles' variety, and the leaves are longer, more pointed, but its merit for good, rapid cover, is excellent.

Pots ..... \$12.50 per C; \$110.00 per M

**AJUGA 'metallica crispa'.** An Ajuga bearing foliage of a purplish-red sheen all season long. The rose pink flowers on short spikes open at about the time dogwood blooms and is thus desirable for underplanting the deciduous, spring flowering shrubs and trees. Prefers an open, sunny location or partially shaded place, and requires moisture during dry times. Winter hardy.

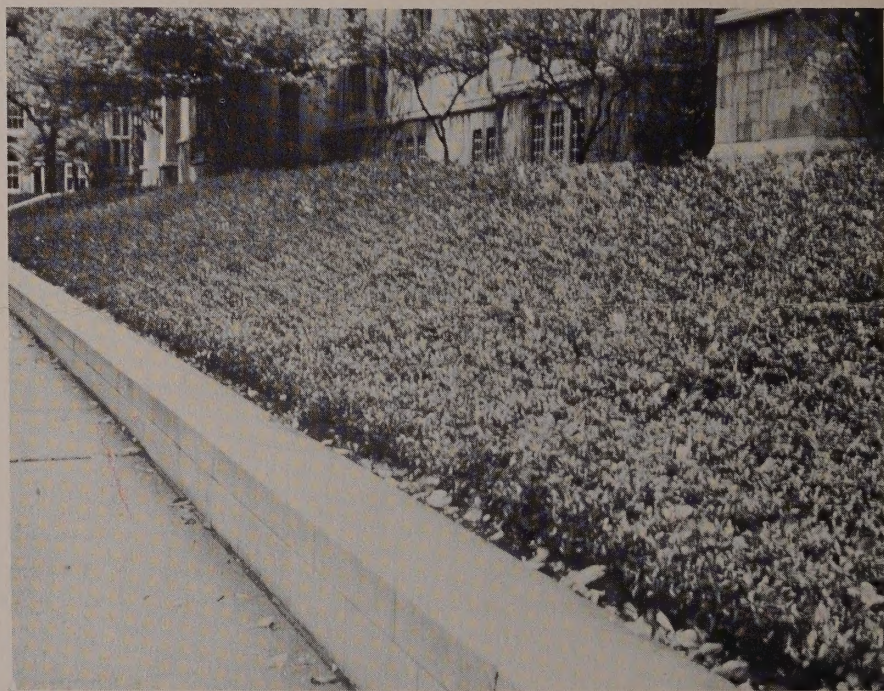

Pots ..... \$14.00 per C; \$125.00 per M

**EUONYMUS fortunei (acutus).** This, the species, is an excellent creeper, holding close to the ground, ideal for large areas in sun or shade. As with all the Euonymus ground covers, some clipping maintenance is required to keep the planting within the intended area. Summer foliage is a rich green, winter color is bronzy.

Pots ..... \$14.00 per C; \$125.00 per M

**EUONYMUS fortunei coloratus.** The purple-leaf wintercreeper, the purple form of the above species, is an ideal cover for the expansive areas, and is also most desirable for an evergreen wall cover. Hardy, withstanding extremes of sun and shade, wet and dry, needing some pruning maintenance for most immaculate effect. Coloratus is today becoming the most popular evergreen ground cover, due to its versatility, its purple winter color, its general satisfaction.

Pots ..... \$14.00 per C; \$125.00 per M

Extensive bank plantings of Euonymus fortunei coloratus at the University of Chicago, Chicago, Ill., illustrate this variety's value as a ground cover.
